

Rotor speed in real hover — three public flight logs vs the two presets used in this report

— rotor 1 — rotor 2 — rotor 3 — rotor 4

NeuroBEM racing quad — indoor, measured rpm

PX4 CODEV AQUILA V3 — outdoor, measured rpm

DJI Phantom 3 — outdoor, motor PWM command (not rpm)

Static spread across motors

Wobble amplitude per motor

Rotor-speed spread and wobble measured directly from three public real-flight logs, not quoted from a paper. Top: one hover window per log, all motors overlaid. Bottom: per-window statistics of every hover window found in each log, against the two presets used in this report. The DJI log records the motor PWM command, not measured rpm, so its percentages are a control-loop proxy and are not directly comparable to the two rpm columns.
