

Capability matrix - prior work vs this work

Scattering-computation and measurement-anchor rows only. Marks are graded evidence, not claims.

	Ray engine	Target mesh	Material model	Aspect-resolved RCS	Rotor motion	Diffraction	Amplitude validation	Geometry mono/bi/multi	Unambiguous velocity

row groups:

scattering computed from a target geometry

measurement-based signature anchor

ambiguity law, no target scattering

this work

Every cell is graded: quoted verbatim from a PDF re-checked at build time, computed by us from a JSON or a full-text term count, or derived from a quoted cell in the same row (not-applicable calls only).
